Industrial IoT Software Engineer Coding Exercise

The responsibilities of an engineer working on Voith's DataPARC Cloud platform will include the creation of value-add applications, along with their deployment and operations.

This work is done using modern devops methodologies, and leverages time series data to provide valuable insights for our industrial manufacturing partners.

Demonstrate your ability to create and operate cloud applications by completing the following task. We will discuss your solution at an in-person interview.

Please publish your solution to either GitHub or GitLab.

Task

Design, author, and deploy an API which accesses time series data in a useful and intuitive way.
